

PHASE 3

Core Modules and User Experience

Authentication, planners, history, page inventory and interface standards

SMARTPOCKET AI • SMART BUDGET AND RECOMMENDATION ASSISTANT

1. Core Modules

1.1 Authentication

- Registration validates identity fields and rejects duplicate usernames or email addresses.
- Login accepts the configured identifier and verifies the password against a bcrypt hash.
- A signed JWT carries user identity and expiration data.
- Protected endpoints resolve the current user before any planner or history operation.

1.2 Home Interior Planner

Inputs include a total budget, selected rooms, quantities for lights, fans, furniture and dining tables, plus optional requirements. The result groups suggested items into practical categories and includes quantities, estimated prices, totals, and search links.

1.3 Party Planner

Inputs include total budget, guest count, event type, venue preference, and selected services such as catering, decoration, entertainment, photography, or return gifts. The result provides a category-wise allocation and venue suggestions.

1.4 Jewelry Planner

Inputs include budget, occasion, style preference, and an optional outfit image. When an image is supplied, the browser encodes it for the backend. The AI layer may return outfit characteristics and matching jewelry suggestions, while the backend still applies schema and budget checks.

1.5 History and Dashboard

History stores the original input and normalized result for later review, reuse, or deletion. The dashboard provides quick access to planners, session information, and available history summaries.

2. User Experience

2.1 Page Inventory

Page	Primary job
Landing	Explain the product and direct users to authentication or planners.
Register	Create a new account with clear validation feedback.
Login	Authenticate and establish the browser session.

Page	Primary job
Dashboard	Provide planner shortcuts and session/history summaries.
Home Planner	Collect room and quantity requirements.
Party Planner	Collect event, guest, venue and service requirements.
Jewelry Planner	Collect occasion, style and optional outfit image.
History	Review, reuse, delete or clear saved plans.

2.2 Interface Standards

- Use a consistent blue design system, restrained accent colors, and readable typography.
- Keep each planner focused with progressive disclosure and clear required fields.
- Show loading, success, authentication, validation, and AI failure states.
- Display budget, spent, and remaining values before detailed item cards.
- Use Indian number formatting for monetary values.
- Keep navigation and result cards responsive on mobile, tablet, and desktop.
